SUMMARY

Data Engineer / ETL Developer specializing in designing, implementing, and optimizing resilient data pipelines, streaming architectures, and cloud ETL solutions across Azure Data Factory, SSIS, Apache Airflow, Databricks, Delta Lake, and SQL Server. Experienced in schema modeling, raw data ingestion, and rigorous data quality validation. Open for freelance contracts and engineering roles.

EDUCATION

Arab Academy for Science and Technology (AAST)

Bachelor's Degree in Computer Science

Alexandria, Egypt

2024 – 2028

EXPERIENCE

Digital Egypt Pioneers Initiative (DEPI)

Data Engineer / ETL Developer

Egypt

November 2025 – July 2026

- Engineered end-to-end ETL/ELT pipelines ingesting, transforming, and loading diverse datasets into structured SQL Server databases.
- Developed stored procedures, views, and complex analytical SQL queries; implemented validation rules and automated error handling.
- Profiled database query bottlenecks and collaborated with cross-functional engineering teams to optimize indexing and execution times.

INTERNSHIPS

Commercial International Bank (CIB)

Summer Intern – “The Green Leap” Program

Egypt

July 2025

- Completed the CIB Summer Internship Program, gaining hands-on understanding of sustainable banking principles, ESG, and data governance.
- Explored enterprise financial workflows, automated data-driven operational processes, and banking system integration methodologies.

PROJECTS

Real-Time E-Commerce Streaming Pipeline

Azure Event Hubs, Databricks, Delta Lake, PySpark, Power BI

🐙 GitHub Repo

September 2026

- Ingested high-velocity clickstream events via Azure Event Hubs into distributed PySpark streaming jobs on Azure Databricks.
- Stored structured historical datasets into Delta Lake with ACID compliance, feeding live real-time analytical feeds to Power BI.

Wuzzuf Airflow Job Scraping Pipeline

Apache Airflow, Docker, Python, SQLite, BeautifulSoup, Pandas

🐙 GitHub Repo

September 2026

- Orchestrated an hourly job scraping DAG in Dockerized Airflow, scraping tech jobs via BeautifulSoup and deduplicating in SQLite.
- Built automated SMTP alerts delivering formatted real-time HTML email reports with structured company, skill, and title data.

Azure Data Factory Sales Pipeline

Azure Data Factory, Azure Data Flow, Azure Blob Storage, CSV

🐙 GitHub Repo

April 2026

- Designed an automated cloud sales ETL pipeline using Azure Data Factory to ingest raw CSV data and compute order revenue metrics.
- Configured Azure Blob Storage containers for cost-efficient staging and set up automated schedule triggers with error alerting.

Telecom ETL SSIS Project

SSIS, SQL Server, CSV, Git, Data Quality

🐙 GitHub Repo

March 2026

- Built an enterprise ETL pipeline using SSIS for telecom call records with IMSI joins, IMEI parsing (TAC/SNR), and timestamp validation.
- Enforced strict data quality rules, rejected record routing, and automated package workflows for table staging and database backups.

TECHNICAL SKILLS

Programming & Libraries: Python, SQL, Java, JavaScript, C, C++, Pandas, NumPy, Matplotlib, Dash, Flask

Databases & Warehousing: PostgreSQL, MySQL, SQL Server, SQLite, Data Warehousing (DWH)

Data Engineering & ETL: ETL/ELT Pipelines, Apache Spark, Apache Airflow, Apache Kafka, SSIS, Delta Lake

Cloud & Platforms: Microsoft Azure (ADF, Synapse, Event Hubs, Stream Analytics), GCP, Databricks, Microsoft Fabric

BI & DevOps Tools: Microsoft Power BI, Git & GitHub, Docker, CI/CD, n8n Automation

LANGUAGES

Arabic: Native Proficiency | **English:** Professional Working Proficiency (B2 Level)
